"Excellence, Naturally—Grass fed, Quality bred"

Selling Privately
at Coodardie Station,
Mataranka NT

32 Bulls, Rising 2 years old

(all eligible for Brahman stud registration on request)

Performance & Fertility tested Sound

Welcome and Thank you

In these crazy and uncertain times, we offer you the certainty and reliability that comes with quiet and dependable Coodardie Brahman bulls.

This year, the bulls are being offered “First in, first served” by private inspection and treaty, as opposed to a set Auction Day. You will notice the price of the individual bull in the top right corner of the page. Bulk discounts will apply. Price is listed free of GST.

We thank you for your support and hope that you have been able to capitalize on strong cattle prices and hopefully reasonable weather conditions.

Yours sincerely,

Moira Lanzarin and families

Ph: 0428 474 262

Background & Preparations

Coodardie Brahman Stud was formed in 1976 by my father and Uncle, Mike & Rory O’Brien. The stud is based on Cherokee bloodlines and has been a closed herd since 2005. From a high of 1200 registered cows, we have now downsized to Coodardie, a small property (2080 ha) running approximately 500 head on native pastures under planned holistic grazing. We control mate in multi-sire groups, with DNA testing for sire determination, and apply constant holistic, multi-trait selection pressure to identify proven performers—for temperament, fertility, adaptability, meat quality and Zebu purity—in a grass based system.

Health & Biosecurity

Trivalent Tick Fever (24/7/21); Singvac 1 yr Virbac Botulinium (3/8/21); 7-in-1 Zoetis Ultravac (3/8/21); JBAS 7 herd. **COVID 19**—During inspection, purchase and pickup please abide by all COVID-19 safety regulations.

Terms & Warranty

Payment on receipt of invoice and prior to trucking, unless by other arrangement. Agents welcome. The bulls are guaranteed fertile and structurally sound. No responsibility is taken for infertility caused by injury or illness once sold. Feedback is always welcomed.

All care has been taken in the compilation of this catalog but use and rely on it at your own judgement. All bulls are eligible for Brahman stud registration. This will require a DNA sire verification test and may prove that the sire listed is not accurate.

Scoring: **1 is best**, 5 is worst, **3 is good** , 3.5 acceptable
 Highlighted boxes show above average results

Classic (CLMS) Rating (www.classiclivestock.com.au)

Tenderness is closely linked to fertility and therefore considered the most important trait, or a base from which to work. The flatter (or more concave) the bone (felt on the jaw and middle of last rib bone and also visible on the hock), the more tender the meat.

Hormonal activity: Directly related to palatability (taste) and fertility—determined by greasy spine, teat assessment, prominence and position of hair swirls and the softness of the skin. All of these are controlled by the pituitary gland.

Escutcheon / Milk Quantity: The escutcheon is the shield-like pattern made by the hair growth from under the tail to teats and across the back of the legs. These different patterns have been correlated to milk quantity and ability to continue lactating whilst pregnant. (Frenchman F.Guenon mid 1700's) Essential for rebreed.

Butter Fat / Milk Quality is determined by the presence of fine, soft hair, yellowish skin and small feathers between the legs, and flakes in the tail swish and in the ears. I.e. produce higher weight weaners.

Fertility Traits: This is a summary classification of basic form, body shape, angularity, body length, depth, femininity, calving capacity, udder, teats, calving capabilities and reproductive capacity.

Meat Traits: This is a summary classification of head shape/muzzle; eye muscle, front end – neck/shoulders/chine, rear end – rump/hips/leg angle, muscle shape and fat cover.

Linear Measure: Is based on the work of Professor Bonsmar and assists in identifying animals that perform well in grass production systems—fertility and meat—through use of quantitative measurements. Recorded here is an average of 6 measurement ratios.

Temperament: Animals assessed within the same management group on their calmness. Animals that are naturally extremely quiet score “1”. Temperament over 3.5 is not tolerated at Coodardie and results in castration of males. We use Low Stress Stock handling techniques to maintain their naturally quiet manner.

Mother's Story & Timeline

This is a graphic representation to show her reproductive performance over her lifespan. It is in chronological order with each box being a calving year, (July to June) and coloured in for a calf or pregnancy. The more coloured boxes the better! The e.g. below is a 10 year old cow who has had 4 calves and is pregnant again.

2013 Calf	2014 Calf	2015 Calf	2016 Calf	2017 Calf	2018 Calf	2019 Calf	2020 Calf	2021 Calf	2022
BIRTH	1yHfr	2yHfr	y	x	y	x	y	y	P

Mating has been on average for 3 months, with the bulls removed prior to weaning.

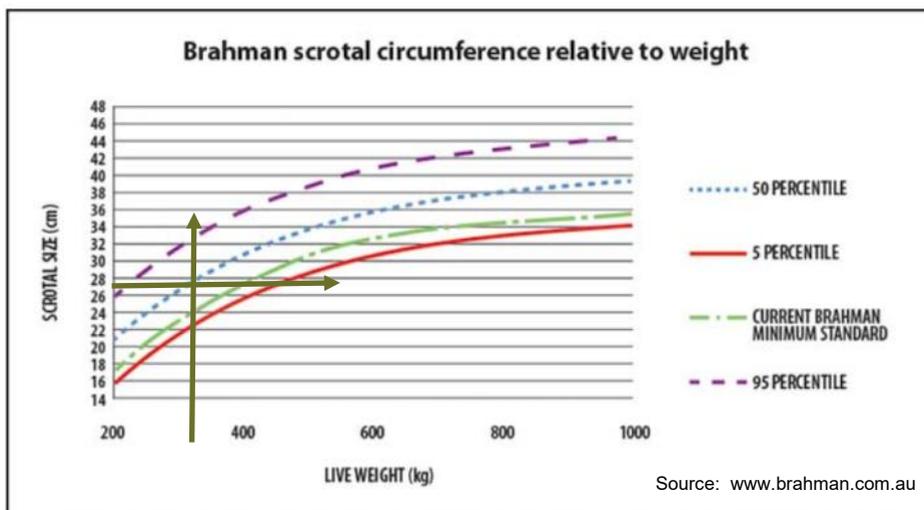

Scrotal and Semen Evaluation

At Coodardie we consider good scrotal length and predominate epididymis more important than scrotal circumference alone. Therefore we have also recorded the scrotal length and calculated a comparative scrotal volume.

Semen Test	
30cm 	
14cm 	
1003	75%

NT DPIR: *“It is important to recognize that the scrotal circumference is related to weight rather than age. The graph shows the average scrotal circumference for Brahman bulls at 2 years old for given weights.”* All the Coodardie sale bulls are at or above the 50 percentile mark.

Figure 1: Details of normal scrotal circumference in the Australian Brahman bull population are provided in Figure 1

Morphology—% Normal Sperm

The bulls have been semen tested sounded by Moira Lanzarin (trained by Bovine Fertility legend, Alf Turner). This involves crush side examination of penis; testicle shape, texture, circumference, length and epididymis; internal palpation and check of seminal vesicles; and collection of sperm followed by microscopic analysis to determine semen motility and morphology (abnormalities).

NT DPIR: *“Throughout puberty semen of different quality is produced. Prior to puberty no semen is produced followed by a stage of semen with a large number of abnormalities until reaching maturity with relatively stable sperm abnormalities.”*

These are young bulls who have just reached puberty.

“Coodardie Bravo 1387”

Price \$4,000

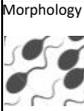

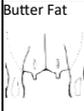

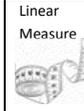

DOB: 8/10/19 **21 months**

Herd ID: 1387/0

Description: Red, **Poll/Scur**

Weight at 3/8/21: 366kg

29 cm SC  13cm L	Morphology 	Tenderness 	Palatability 	Milk Quantity 	Butter Fat 	Fertility 	Meat 	Linear Measure 	
870	60	2.0	2.0	2.0	3.0	2.43	2.38	2	2.0

SIRE: Coodardie All Bull (Grey Dehorn)

Dam: Coodardie GP 184 (Grey, Poll)

Mother's Story & Timeline

2008	2009	2010 Calf	2011 Calf	2012 Calf	2013 Calf	2014 Calf	2015 Calf	2016 Calf	2017 Calf	2018 Calf	2019 Calf	2020 Calf	2021 Calf	2022
1yHfr	2yHfr	x	x	y	y	y	y	x	y	Y	x	y	y	x

Comments: Excel is a near perfect scorer. Nervous of extremes, my ideal score is all 2's or 2.5. Excel is very close to that mark. I am not concerned at his currently low semen morphology as it could simply be his sperm sorting themselves out during puberty.

“Coodardie Kyle 1488”

Price \$6,000

DOB: 10/08/19 **23 months**

Herd ID: 1488/0

Description: G Gyr, DeHorn

Weight at 3/8/21: 309kg

Semen Test		Classic Rating (Individual Traits)				(Averaged Traits)			Temp.
29 cm SC	Morphology	Tenderness	Palatability	Milk Quantity	Butter Fat	Fertility	Meat	Linear Measure	
 13cm L									
870	88	2.0	2.5	2.5	2.5	2.36	2.50	2.5	

SIRE: Coodardie Big Brother (White Dehorn)

Dam: Coodardie G P 1000 (GGyr, Poll)

Mother’s Story & Timeline

2014	2015	2016	2017 Calf	2018 Calf	2019 Calf	2020 Calf	2021 Calf	2022
BIRTH	1yHfr	2yHfr	x	Y	x	y	y	x

Comments: Again, an amazing result. A tenderness score of 2 in Brahman’s is not common, this combined with above average on all but one ranking

is impressive. This is a sire worth considering.

“Coodardie Ewart 1491”

Price \$3,500

DOB: 19/08/19 **23 months**

Herd ID: 1491/0

Description: Grey, DeHorn
